Subjective: patient came in with severe pain in back, neck and radiating from back of neck over head to eyes. He had had this years since he was diagnosed after much effort with shingles of the chord and accompanying meningitis. He took advil continuously for only 1-3 hours a night. His work was as a counselor mediating violent family situations; extremely stressful. He had extreme pain abdomen with very little appetite and thirst.

Assessment: The patient had never recovered from his shingles (zoster). He took medication which caused an ulcer in his stomach preventing him from getting nutrients that might allow him to heal viral insult, stress, lack of nutrients, lack of sleep from pain developed the imbalance which caused chronic fatigue.

Treatment: The patient was treated with acupuncture for pain acid for the fibromyalgia, and Cat's Claw, 3,000mg, for viral insult restore his gut to order. He was asked to rest and then begin exercise.

Recovery: Recovery was very quick. He began sleeping immediately (during acupuncture) and within 24 hours, he was able to eat and not have the stomach pains which he usually experienced. His pain seemed much better (instead of 1, on scale of 1-10, it jumped to 10 better). His headaches occurred only with severe stress. He eventually decided to change careers. Now after 3 months, he continues with Cat's Claw when he has gastric distress from stress, but otherwise is one of the healthiest people I know; just recently marrying!

o **Subject #2: 66 year old female, diagnosed with breast cancer**

Subjective: This patient came requesting Cat's Claw for her treatment during radiation. Her tumour was already excised and lymph nodes negative.

Treatment: Her treatments consisted of Cat's Claw, 3,000 mg a day and weekly acupuncture.

Result: During 9 weeks of radiation treatments, she had no hair loss, energy maintained stable. She also had no loss of appetite or weight. She received minor local burns on the skin in area which healed quickly. Her physicians were amazed by her recovery. She feels better now than before the cancer. We will assess her continuously for the next 10 years.

Dr Ambrose has also reported seeing significant improvement in patients suffering from Crohns disease, ulcers, asthma, arthritis, dysbiosis and chronic fatigue syndrome. One patient, a woman had been taking sulfasalazine (a sulfa drug with numerous side effects) to treat a bleeding ulcerative condition associated with Crohns, was able to quit the drug after a few weeks using Cat's Claw. Her condition seems to have cleared up and she is reported experiencing much higher levels of energy.

Dr Ambrose also mentioned that she has been able to eliminate
